

34. (Amended) A method for the treatment of a carcinoma comprising administering to a patient at least one extract from an animal tissue, serum or cell source, wherein said extract

a) comprises allogeneic or xenogeneic MHC molecules;

b) is prepared by a) homogenizing the tissue, serum or cell source in the presence of

NP40, or b) treating it with an acid, or c) treating it with a proteolytic enzyme; and

c) is effective to reduce the number of tumor cells in the patient compared to the number of tumor cells if the patient is not so treated.

36. (Amended) The method of claim 35, wherein the at least two extracts originate from different species.

39. (Amended) A kit useful for the treatment of a carcinoma in a patient, comprising at least two containers, each comprising an amount of MHC molecules which may be found in an animal tissue, serum or cell source different from that of the other container, wherein said extracts

a) comprise allogeneic or xenogeneic MHC molecules;

b) are prepared by a) homogenizing the tissue, serum or cell source in the presence of NP40, or b) treating said source with an acid, or c) treating said source with a proteolytic enzyme; and

c) are each effective to reduce the number of tumor cells in the patient compared to the number of tumor cells if the patient is not so treated.
